KenFinch.ca Development Update

March 21, 2026 | Prepared by Geoff

Estimated Time Spent: ~5 hours

1. Fixed Critical Site Outage [CRITICAL]

The site was completely down due to a known bug in Firebase's deployment system (Cloud Run 409 revision conflict). After multiple fix attempts, we migrated the entire deployment pipeline from the legacy Firebase Hosting + webframeworks flow to **Firebase App Hosting** — a newer, more reliable product. The site is now live and auto-deploys whenever code is pushed to GitHub.

2. Analytics & Tracking Pixels Configured

Created and configured secrets in Google Cloud for all four tracking platforms. Conversion tracking is now active across all platforms.

- Google Analytics 4 (GA4): G-0G2EJD6QT3
- Meta / Facebook Pixel: 220037639076483
- TikTok Pixel: D6VKIJRC77U3AVTJ8TEG
- Google Ads Tag: GT-KTTRGRNP

3. 10 Oakville Neighborhood Landing Pages

Created dedicated SEO-optimized pages for every major Oakville neighborhood. Each page includes market data, average prices, school info, local amenities, Ken's seller insights, and strong calls-to-action. Added "Neighborhoods" to the main site navigation.

- Old Oakville, Bronte, Glen Abbey, River Oaks, West Oak Trails
- Eastlake, College Park, Morrison, Palermo, Uptown Core

4. SEO Fundamentals

Added robots.txt and a dynamic sitemap.xml that automatically includes all static pages, blog posts, and neighborhood pages. Added JSON-LD structured data for Google rich results. These are foundational for search engine visibility.

5. Enhanced Contact Form

Added a "selling intent" dropdown and an optional message field to the contact form. Both are captured in the email notification and saved to Firestore for lead qualification.

- Intent options: Ready to list, Curious about value, Thinking 3–6 months, Want market update, Other
- Helps prioritize leads by readiness to sell

6. Homepage Design Overhaul

Comprehensive visual refresh to create a more premium, trustworthy feel for potential sellers.

- Larger, immersive hero section with fade-in animations
- Stats bar: 20+ years, 500+ homes, 98% satisfaction, 10 neighborhoods
- Premium card hover effects with gold accent shadows
- Neighborhoods call-to-action section on homepage
- Richer footer with phone, email, quick links, and social icons

7. Three New Blog Posts (6 total)

Published three new SEO-targeted blog posts to build organic search traffic for seller-intent keywords.

- "How to Price Your Oakville Home in 2026: A Data-Driven Approach"
- "7 Staging Tips That Sell Oakville Homes Faster"
- "Selling in Oakville vs. Burlington in 2026: What Homeowners Should Know"

8. E2E Testing & CI/CD

Set up automated end-to-end tests for the contact form, home valuation tool, and overall site health. Created GitHub Actions workflows for automated testing. Disabled the old broken deploy workflow.

STILL TO DO

- ■ Create Google Ads conversion actions to get the 3 conversion labels
- ■ Set up Google Ads and Meta retargeting campaigns ($1,200–1,500/month budget)

- Continue blog cadence (2–4 posts per month)
- Additional design refinements based on feedback
